LIFELINK

Sample Data & Test Fixtures

A synthetic dataset for testing the Blood & Organ Coordination Network

Institutions	**26**
Donor profiles	**30**
Blood unit records	**80**
Organ records	**15**
Request fixtures	**49**
Historical demand rows	**864**
RAG documents	**10**
RAG evaluation questions	**25**

Dataset snapshot: 2026-10-22

IMPORTANT: All names, contact fields, records, locations, coordinates, dates and values in this document are fictional test fixtures. They are not real hospitals, donors, or patient records. Do not use them for medical decisions.

Includes institution directories, donors, blood-unit inventory, organ records, request workflows, emergency broadcasts, notifications, audit events, historical demand for analytics/ML tests, and a ready-to-ingest RAG document corpus (included in the companion ZIP).

1. How to use this dataset

This packet is designed to test LifeLink end-to-end: institution dashboards, role filters, location search, blood inventory, organ request workflows, emergency broadcasting, expiry warnings, analytics, demand forecasting, shortage-risk displays, audit history, and retrieval-augmented generation (RAG).

The accompanying ZIP contains CSV/JSON files. Use the PDF as a readable catalog, and use the CSV/JSON files for seeding or importing data. Your Prisma schema may use different names, so map the fields during seeding.

Recommended seeding order

1. Hospitals, blood banks and organ centres. 2. Donors. 3. Blood units and organ records. 4. Blood requests, organ requests and emergency requests. 5. Notifications and audit logs. 6. Historical demand and prediction fixtures. Then ingest the Markdown documents in rag_documents/.

Data safety and scope

The sample data uses fixed demo dates and deliberately varied statuses to exercise filters. Blood expiry dates and organ timing values are artificial test values, not clinical guidance. The organ compatibility field is a placeholder that always requires qualified review. LifeLink does not perform delivery/transport, donor eligibility screening, clinical decisions, or organ commerce.

Included entities

entity	records	purpose
hospitals	12	Hospital directory and locations
blood_banks	8	Blood inventory suppliers
organ_centres	6	Organ coordination centres
donors	30	Opt-in donor contact fixtures
users	57	Role/login mapping fixtures
blood_units	80	Unit-level blood inventory/status tests
organs	15	Synthetic organ availability records
blood_requests	25	Standard blood request lifecycle
organ_requests	12	Organ request lifecycle
emergency_requests	12	Emergency broadcasts and responses
notifications	36	In-app notification UI
audit_logs	40	Audit timeline/filtering
historical_demand	864	Time-series model/analytics tests
inventory_summary	64	Bank/group inventory aggregate
ml_prediction_fixtures	8	Sample prediction display fixtures

2. Hospital Directory

Fictional hospitals and metadata for role-based dashboards, institution verification filters, request ownership, and map markers.

id	name	city	region	latitude	longitude	email	verification	operational

5. Registered Donor Fixtures

Synthetic donor profiles for filtering by blood group, region, notification preference and profile status. Contact values are not for real outreach.

Do not use the demo donor list for real-world donor selection or outreach.

6. Demo User/Role Mapping

Synthetic user-to-entity mapping for testing role-based routing and permissions. Passwords and hashes are intentionally omitted; generate them through your own local auth seed process.

Use only in a local development environment. Institution verification and account activation are separate concepts.

7. Blood Unit Inventory

80 individual synthetic units with varied statuses and demo expiry dates. Useful for testing available-stock search, reservation, invalid states, and expiry alerts.

Expiry dates are artificial fixtures. Validate software behaviour only; do not infer clinical shelf-life rules.

8. Organ Availability Records

Synthetic organ inventory fixtures. The demo blood-group label and timing fields are only test data; every compatibility review remains marked for clinical review.

The system must not interpret these records as actual organs available for real allocation.

10. Organ Requests

Organ requests connect hospitals to a specific organ and centre. The rule result is deliberately labelled as a demo indicator and clinical review remains required.

id	hospital_id	organ_id	organ_centre_id	organ_type	configured_rule_result	status	priority	created_at	responded_at

14. Historical Demand Time Series

864 synthetic monthly records across 6 regions/cities and 8 blood groups for dashboard analytics and baseline demand-model experiments. Values intentionally include trends and variation.

These figures are generated test data, not actual demand statistics. Use a chronological train/test split to avoid leakage in forecasting experiments.

month	city	blood_group	units_requested	units_fulfilled	units_short	opening_stock_demo	shortage_event

16. Prediction Display Fixtures

Example output rows for dashboard UI testing only. These are not model-generated predictions; replace them with actual inference results when the ML pipeline is implemented.

id	snapshot_date	city	blood_group	forecast_horizon_days	forecast_units_demo	risk_label_demo	model_name	is_real_prediction

17. RAG Seed Corpus

The companion ZIP contains ten Markdown files in rag_documents/. Each file includes YAML metadata followed by the source text. Ingestion should parse metadata, chunk only the document body, and preserve source ID, title, version, category, status, and allowed roles with each chunk. Filter inactive or unauthorized documents before assembling context for the LLM.

document_id	title	category	allowed_roles	version	status	filename

Recommended RAG smoke test

1. Ingest the 10 synthetic Markdown documents. 2. Verify each chunk retains document metadata. 3. Run all 25 questions from rag_evaluation_questions.csv. 4. Inspect whether the expected source IDs appear in retrieved results. 5. Check citation correctness and answer support. 6. Verify that unsupported or clinical questions lead to abstention rather than a fabricated answer.

Important: this corpus is intentionally about LifeLink application workflows and metric definitions. It is not a substitute for approved clinical guidelines. If clinical guidance is ever needed, ingest only current, authoritative documents after review and permission from the appropriate qualified authority.

18. RAG Evaluation Question Set

The full machine-readable test file is rag_evaluation_questions.csv in the companion ZIP. The table below shows the first 15 answerable questions; the full CSV also includes abstention cases for unsupported clinical or private-data questions.

test_id	question	expected_document_ids	expected_behaviour
RQ-001	How does a hospital create a standard blood request?	DOC-LL-002	answer_with_sources
RQ-002	What does Pending mean for a request?	DOC-LL-006	answer_with_sources
RQ-003	Can LifeLink transport blood to a hospital?	DOC-LL-001;DOC-LL-002;DOC-LL-004	answer_with_sources
RQ-004	Which inventory states should be excluded from available search results?	DOC-LL-003	answer_with_sources
RQ-005	How is an emergency blood request broadcast?	DOC-LL-004	answer_with_sources
RQ-006	Can the RAG assistant approve an organ request?	DOC-LL-009;DOC-LL-005	answer_with_sources
RQ-007	What does the organ compatibility indicator mean?	DOC-LL-005	answer_with_sources
RQ-008	What should happen when an answer is not supported by documents?	DOC-LL-009	answer_with_sources
RQ-009	How are uploaded knowledge documents versioned?	DOC-LL-007	answer_with_sources
RQ-010	How is average response time calculated?	DOC-LL-008	answer_with_sources
RQ-011	What causes an inventory alert in this demo?	DOC-LL-003;DOC-LL-008	answer_with_sources
RQ-012	Can LifeLink determine whether a donor is medically eligible?	DOC-LL-001;DOC-LL-004;DOC-LL-009	answer_with_sources
RQ-013	What information should an audit event capture?	DOC-LL-007;DOC-LL-010	answer_with_sources
RQ-014	What is the fulfilment rate metric?	DOC-LL-008	answer_with_sources
RQ-015	Does accepting a request mean that delivery is complete?	DOC-LL-006	answer_with_sources

19. Data Validation and Testing Checklist

area	test
Inventory search	Filter by blood group, city/radius and available status; verify Expired, Issued and Quarantined are not offered as available.
Expiry alert	Use snapshot date 2026-10-22 and demo expiry values; verify configurable warning logic without treating thresholds as clinical guidance.
Request lifecycle	Move selected request fixtures through pending -> accepted/rejected; verify role permissions, inventory reservations and real-time notifications.
Emergency broadcast	Check recipient filtering, opt-in preference, response counts and no-response status.
Organ workflow	Only show requestable records; keep clinical review requirement visible; test accept/reject and audit event.
Maps	Plot institution markers; use coordinates as approximate demo points only.
Analytics	Recompute request counts, response times, expiry warnings, fulfilled units and shortage events from underlying tables.
Forecasting	Sort historical_demand by month and use a chronological holdout; compare baseline forecast against actual synthetic held-out values.
RAG retrieval	Check retrieved source IDs against expected_document_ids in the evaluation set.
RAG access control	Verify role filters prevent retrieving documents not allowed for the current role.
RAG abstention	Questions RQ-017 to RQ-020 should not produce unsupported clinical advice, fabricated institution facts or donor personal data.
Audit	Verify create/update/accept/reject actions emit actor, action, target, timestamp and result.

Implementation note

The dataset is app-agnostic. It does not include passwords or password hashes; create demo user accounts through your authentication seed code. Add foreign-key constraints after loading parent institution rows. If your schema uses enums with different names, map the supplied status strings deliberately rather than importing blindly.

End of sample-data catalog. Use the companion ZIP for full CSV/JSON data and RAG Markdown documents.
